Dear CDG & NGly1 Community,

THE RECOMMENDATION BY CDG EXPERTS IS FOR CDG & NGly1 PATIENTS, PARENTS AND CAREGIVERS TO BE VACCINATED AGAINST COVID-19.

Multiple safe and effective COVID-19 vaccines are now available for all individuals 5 years and older, including those with CDG.

Many CDG & NGly1 patients have already been vaccinated without concerning side-effects. The COVID-19 vaccines are effective in preventing COVID-19 infection in 90-96% of the general population, although no specific testing of the effectiveness in CDG patients have been conducted yet.

After vaccination, we recommend continuing to follow other prevention protocols already in place:

- Wear a mask that covers your nose and mouth.
- If possible, stay at least 6 feet apart from other people.
- Wash your hands with soap and water for 20 seconds or use hand sanitizer with at least 70% alcohol.

If you have any additional questions regarding this recommendation, please do not hesitate to reach out to CDG CARE at info@cdgcare.com.

Warm Regards,

The Frontiers in CDG Consortium and Patient Advocacy Group Team
